

Cyclone

SAFEAERO Cyclone Aircraft De-Icing Unit

The de-icing operation of an airport is a part of its winter Service.

Large, expensive de-icing units are not economical for regional airports, if only a few de-icing operations are expected.

The SAFEAERO Cyclone de-icer was developed for such airports, which offer professional aircraft de-icing, but have only limited budget for de-icing equipment

Striking Advantages

Cost efficient de-icing unit

- Simple, robust construction
- Vertical lift with platform
- Independent deicing operation

Flexible Operation

- Self propelled chassis
- Aircraft de-icing with Type I / II / IV fluids
- One or two tanks
- Usable also for maintenance or cleaning

Important Data

- Working height over 10m
- Suitable for B737, A320 or MD80
- Tank volume up to 1200 l
- Spraying capacity up to 100 l/min
- Electrical heating
